Dear Friends And Colleagues,

Here we are with the 4th edition of the Lausanne Fresh Cadaver Facial Dissection Course !

The main reason why this course has a greater success each year is the unique association of the anatomical dissections followed by the surgical techniques.

After the course you will be safer and more effective while performing your procedures of face aesthetic surgery and medicine due to the knowledge and understanding of the dangerous zones and the best surgical techniques.

Participants from around the world agreed that no other course could give them the same level of confidence while performing face surgeries and aesthetic medicine.

We invite you to come and share this unique experience with us !
